Mobile Software Engineer with 7 years of experience specialized on Android development. Likes building high performing apps with strong customer focus. Interested in programming, tech and AI.

WORK EXPERIENCE

23/09-26/08

Pinterest (México)

Senior Software Engineer (Android Modernization/Platform)

- Ran A/B tests to take data driven decisions that improved the experience of +100 million users, by implementing end to end features with high quality and test coverage using AI agentic tools such as Codex and Claude Code.
- Improved developer velocity and app maintainability by driving the adoption of a modern android architecture based on MVI, modernized ~50% of the codebase.
- Reduced app crashes 2% by introducing a custom error handling API for network calls.
- Increased ads clicks and impressions rates 10% and 4% respectively by modernizing the internal architecture of key ads related components.
- Advanced technology adoption speed 10x by implementing automated code migration workflows with AI tools (Ktlint adoption and Java to Kotlin migration).
- Achieved a 99.7% app stability rate by monitoring the crash user rate during on call shifts to improve the user experience for millions of users.
- Led the group in charge of onboarding new android engineers to the company.
- Mentored +5 engineers trough 1on1 sessions and wrote +10 tutorials and documentation used widely in the company.

21/07-23/07

Logient (Canada)

Consultant Android Developer

- Development of new features and app maintenance to support business needs for client in networks industry. Using Kotlin/Java and latest Android technologies.
- Worked on making the app Play Store compliant by implementing Storage Access Framework (SAF) replacing all access read/write permissions.
- Enhanced developer velocity by implementing custom tools such as a mock api server to simulate real hardware used for network measurements.

20/10-21/07

Capgemini Engineering (former Altran México)

Intermediate Software Engineer

- Designed a custom app architecture based on MVVM and clean code, used for implementing quick prototypes for Android Car/Auto applications, supported by Google car-ui lib, Jetpack components such as Navigation, Room, ViewModels and Livedata.
- Provided guidance to 3 junior devs and 1 intern through 1on1 sessions.

19/11-20/10

Banco Azteca (Grupo Salinas)

Junior Android Developer

- Development of Android libraries for 3rd party use.
- Api rest consume with Retrofit and Coroutines/RxJava.
- Implementation of 3rd party SDKs.
- Minification and obfuscation of signed APKs/AARs for app store publishing.

TECHNICAL SKILLS

Programming languages: Kotlin, Java, Python (intermediate), SQL (basic).

Technologies: Android SDK, Jetpack, Firebase, Retrofit, Git, ViewModels, Livedata, Coroutines, RxJava, CameraX, Biometric, Flows, MVVM, MVI, Room, Hilt, Compose, Django, CI/CD, Gradle.

AI Tools: AI assisted development with Claude Code, Codex, Cursor, Copilot. Both desktop and CLI.

Languages: Spanish (native), English C1 (Technical).

EDUCATION

Instituto Politécnico Nacional, Escuela Superior de Cómputo (ESCOM)

Bachelor's in Computer Systems (Graduated June 2019, GPA 8.5/10.0).
